The logo for edda is displayed in white on a red rectangular background. The letters 'e', 'd', 'd', 'a' are stylized with internal geometric patterns. A registered trademark symbol (®) is located to the upper right of the 'a'.

About US

Tunçel Silikon was founded in 1991 in Ankara. It produced all kind of industrial silicone parts. As there was no silicone products maker in Turkey, all medical silicone products had to be imported with high prices and unpractical. So, it began the productions of this product with a Class 10.000 room. All products are produced for medical purpose has the characteristics of non-toxic, tasteless, odorless, long term quality, resistance to embolism, fat, blood, urine, medical solution and low stimulation. Our products are sold as OEM in Turkey. We aim to sell our products all over the world with ISO 13485 and EEC certificates. Our products have successfully passed all the tests, 5 years shelf time and there sterility this period. Tuncel Silikon is one the leading enterprise producing medical silicone products in Turkey.

SILICONE FLAT DRAIN

edda® Silicone Flat Drains are used for drainage of blood, serious or purulent matter and other body fluids collected in operation cavity after surgery. For preventing soft-tissue injury while installing in and extraction out from body, Flat Drains are produced soft and medical grade silicones. Flat Drains are designed for resistant to kink. Flat Drains have radiopaque lines which is easily visible under X-Ray. Flat Drains are produced with high tensile material, so it can't be easily ruptured by surgeons during withdraw from body. The holes of the drains are facilitated to drainage the liquid material from body.

SILICONE BLAKE DRAIN

edda® Silicone Blake Drains are used for drainage of blood, serious or purulent matter and other body fluids collected in operation cavity after surgery. For preventing soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. Blake Drains are designed for resistant to kink. Blake Drains have radiopaque lines which is easily visible under X-Ray. Blake Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body. The ducts of the drain's are facilitated to drainage the liquid material from body.

SILICONE REDON DRAIN

edda® Silicone Redon Drains are used for drainage of blood, serious or purulent matter and other body fluids collected in operation cavity after surgery. For preventing soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. Redon Drains are designed for resistant to kink. Redon Drains have radiopaque lines which is easily visible under X-Ray. Redon Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body. The holes of the drain's tip are facilitated to drainage the liquid material from body.

SILICONE THORAX DRAIN

edda® Silicone Thorax Drains are used for drainage of blood, serious or purulent matter and other body fluids collected in operation cavity after surgery and chest operations. For preventing soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. Thorax Drains have radiopaque lines which is easily visible under X-Ray. Thorax Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body. Thorax Drains have cross holes in drains. This holes of the drain's tip are facilitated to drainage the liquid material from body.

SILICONE STRAIGHT DRAIN

edda® Silicone Straight Drains are used for drainage of blood, serious or purulent matter and other body fluids collected in operation cavity after surgery. For preventing soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. Straight Drains have radiopaque lines which is easily visible under X-Ray. Straight Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body. Straight Drains have cross holes in drains. This holes of the drain's tip are facilitated to drainage the liquid material from body.

SILICONE SUMP DRAIN

edda® Silicone Sump Drains are for drainage of blood, serious or purulent matter and other body fluids collected in operation cavity after surgery. For prevent soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. Sump Drains have radiopaque lines which is easily visible under X-Ray. Sump Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body. One or two lumens facilitate air circulation and maintain stability of air pressure. Sump Drains have cross holes in drains. This holes of the drain's tip are facilitated to drainage the liquid material from body.

SILICONE T DRAIN

edda® Silicone T Drains are used for drainage of blood, serious or purulent matter and other body fluids between liver and stomach collected in operation cavity after surgery. For preventing soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. T drains have high tensile resistance. T Drains have radiopaque lines which is easily visible under X-Ray. T Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body.

SILICONE PENROSE DRAIN

edda® Silicone Penrose Drains are used for drainage of blood, serious or purulent matter and other body fluids with passive drainage collected in operation cavity after surgery. For preventing soft-tissue injury while installing in and extraction out from body, drains are produced soft and medical grade silicones. Penrose Drains have radiopaque lines which is easily visible under X-Ray. Penrose Drains are produced with high tensile material so it can't be easily ruptured by surgeons during withdraw from body. Penrose Drains have channel in drains. This channel of the drains are facilitated to drainage the liquid material from body.

Silicone Suction Hoses are used for suction body liquids and ensure suction. Products are able to design with various sizes and lengths according to customer's demands. Our suction hoses have EC Certification. Our Products are designed for kink resistance and manufactured with medical grade silicone.

Silicone OEM Manufacturer, We are able to manufacture Silicone OEM Components and various solid silicone molding depend on customer's demands. Our production service offers as an OEM from medical and implant grade silicones.

Orthopedic Tools, We are able to perform as an OEM, production of all orthopedic instruments and equipments and solid silicone moldings.

Implant, Our Company are able to perform research and development products from implant grade silicone and carry out their serial production.

Outsource production is performed as an OEM according to customer demands and offers.
